JCU meets green aim

The demolition of buildings for James Cook University's $85 million Science Place redevelopment set a major environmental benchmark after 96 per cent of the scrap material was recycled. In recognition of the feat, the project is now on track to be awarded a prestigious US environmental ranking. JCU's estate office director Hilary Kavanagh said The Science Place would be the largest ever construction project for JCU, delivering a 12,000sq m facility.
